

Drowning Data Snapshot

Prepared for the Lifesaving Society Canada by the Drowning Prevention Research Centre Canada

QUEBEC WATER-RELATED FATALITIES AND DEATH RATES, 2013–2022

This infographic summarizes the most recent data on water-related fatalities available from the Office of the Chief Coroner for Quebec. With the exception of the first chart, all data refers to the most current five-year period, 2018–2022.

WHO IS DROWNING?

WHEN?

WHERE ARE THEY DROWNING?

WHAT WERE THEY DOING?

WATER-RELATED FATALITIES BY MOST COMMON RECREATIONAL ACTIVITY

* The person intended to be in the water (e.g. swimming/wading)
 ** Unintentional fall into water (e.g. walking/biking/working near water and fell in)

RISK FACTORS

CHILDREN Age: <5

89%

Supervision absent
or distracted

- Not wearing a PFD
- Weak or non-swimmer
- Supervision absent
- Consuming alcohol
- Alone

YOUNG ADULTS Age: 15–34

69% of cases, where known

METHODS:

Water-related death data is extracted from the office of the Chief Coroner or Medical Examiner for each province and territory. Data is collected for all deaths resulting from incidents "in, on, or near" water. "Near water" incidents were included if the intent was closely related to water-based recreational, vocational or daily living activity. The data includes only unintentional deaths, not deaths due to natural causes, suicide, or homicide.

ACKNOWLEDGEMENTS:

We gratefully acknowledge the support, co-operation and efforts of:

- The Chief Coroner's and Medical Examiner's Offices in each province/territory, who permitted and facilitated confidential access to coroner's reports on unintentional water-related deaths.
- The volunteers who contributed their time and energy to extract data from the files.
